Smart Traffic Management®

**FOR IMMEDIATE RELEASE**

## **Telegra Introduces topXview™ ITS Solutions**

*Offering Single Operator Control of Roads, Bridges, and Tunnels*

**DALLAS – November 16, 2008** – Telegra Inc., a leading provider of smart traffic management solutions, introduces the topXview™ Intelligent Traffic Manager™ and Intelligent Tunnel Manager™, the only comprehensive Intelligent Transportation Systems (ITS) solution that incorporates all traffic and infrastructure functions into one robust package. Exclusively designed for the ITS Industry, the topXview Intelligent Traffic or Tunnel Manager allows a single operator to control multiple subsystems, including video, communications, environmental monitoring and complex open-road applications on highways, bridges, and in tunnels.

“By fully integrating all installed systems through a single workstation, Intelligent Traffic Manager offers simple, one-stop control of your roadway monitoring and management activities,” said John Kasik, president and chief executive officer of Telegra. “Designed to meet diverse traffic management demands, Intelligent Traffic Manager has the built-in features that hands-on operators require. This makes comprehensive control of various roadways easier and more effective than ever before.”

topXview Intelligent Traffic Manager's central point of interaction is the main user interface. Through a series of drivers, users connect to all systems along the roadway for controlling and managing traffic flow, as well as viewing, analyzing and storing data. This complete ITS tool:

- integrates data regarding traffic and road conditions on bridges, as well as on local roads, arterial roadways, toll roads or freeways;
- controls field devices and subsystems via WAN or LAN by means of fiber-optic, twisted-pair or wireless infrastructure;
- displays real-time data received from field devices and subsystems regarding traffic, road conditions, or the operating status and maintenance information of a field device via a graphic user interface;
- uses a software algorithm to supplement data received from field devices and subsystems to disseminate the most accurate information to travelers.

## **topXview ITS Solution...Page Two**

The topXview™ Intelligent Tunnel Manager™ is Telegra's solution to meet the challenges of safe, effective tunnel operations. Containing all the functions found in the Intelligent Traffic Manager solution, it adds additional features specifically tailored for tunnel management. With topXview Intelligent Tunnel Manager, a single operator can control ventilation and air quality measurement, fire detection, water pumps, power system monitoring, video, emergency communications, and more.

“Tunnels present unique challenges to transportation system operators,” said Kasik. “With specific needs demanding to be addressed, an ITS management solution designed for tunnel applications is an indispensable tool. And one that, until now, has not been available.”

Enabling operators to quickly obtain and assess information on road conditions, both of Telegra's topXview products for traffic or tunnel management have all the key features necessary to automate, analyze and report operations and traffic on bridges, along closed system or open roadways, on tolled highways, and in tunnels. Available automation components offer a wide range of automated, semi-automated and manual scenarios, and standard procedures. A simple and reliable archiving system can store all relevant data on a hard drive, DVD, CD or other media for future browsing, analyzing, and organizing.

Through a database and Web interface, users can access detailed reports concerning all system activities in clear, graphical forms designed according to traffic management process requirements. Finally, Telegra's Web interface uses the highest level of security so users can enjoy the benefit of “wherever/whenever” access with the confidence that all critical data is protected.

### **About Us**

Telegra, Inc. is one of the leading providers dedicated solely to the transportation industry, specializing in the design, manufacture, installation, and maintenance of ITS solutions. For more than 20 years and 3,000 successful installations worldwide, Telegra has offered traffic management control devices and systems that meet the highest standards and is being recognized for its quality, exceptional durability, longevity, and reliability. Telegra's products feature state-of-the-art technology and are engineered to unsurpassed performance – from LED Variable Message Signs, Emergency Roadside Call Systems, and Roadside Field Controllers to a unique topXview Intelligent Traffic Managers™ for highways and tunnels.
